

# Alberto Mario Burlacu

Full Stack Developer

I build and run e-commerce systems that stay fast and cheap to operate.

## 01 ABOUT

I'm a full stack developer based in Romania. Most of the last decade I've worked on e-commerce: rebuilding front ends that had gotten slow, moving services onto managed cloud infrastructure, and keeping the running costs down while traffic grew.

I work in PHP and JavaScript on the product side, and with Docker, AWS and Terraform on the infrastructure side. I've mostly worked in small teams, which means owning a problem from the first commit through to production.

---

## 02 EXPERIENCE

### C&A Connect

Feb 2019 – Present

Senior Developer · caconnect.ro

*E-commerce company selling physical and digital games.*

- Rebuilt the storefront front end for faster loads; infrastructure spend came down as a side effect. TODO: QUANTIFY
- Replaced the existing checkout with a headless commerce flow. TODO: QUANTIFY
- Migrated object storage, transactional email, audit logs and internal file storage onto managed cloud services.

### CloudEBS

Feb 2017 – Jul 2019

Senior Developer · cloudebs.com

*E-commerce development company working on Magento.*

- Built Magento extensions for client stores.
- Refactored an existing codebase onto Magento 2 coding standards.

### NAV Communications

Apr 2012 – Jun 2014

System Administrator · nav.ro

*Hosting company with ISO certification for Tier 3 colocation.*

- Ran and monitored client servers on demand.
- Kept critical NOC infrastructure healthy through continuous health monitoring.
- Wrote internal tooling to monitor those services.

### Freelancing

Jul 2009 – Present

Developer · Senior Developer · freelancer.com

*Ongoing, alongside full-time work.*

- Delivered client projects on mainstream stacks, and improved existing codebases rather than rewriting them.

TODO: NAME 2-3 CLIENTS AND OUTCOMES

---

## 03 PROJECTS

### Ecommerce Basket Widget

Feb – Apr 2020

A SaaS basket you drop into an existing shop so it gets a working shopping cart without replacing its storefront.

LARAVEL · VUEJS · MYSQL · PHPUNIT

LIVE: TODO REPO: TODO

---

## Digital ERP

Jun 2020 – Feb 2021

Sells digital products — game codes, wallet vouchers, subscription cards — across terminals and partner marketplaces, with one API adapting to each channel.

PHP · FATFREE FRAMEWORK · MONGODB · NODEJS

LIVE: [TODO](#)

REPO: [TODO](#)

---

## CNAIR — Self-Emitting Docs

Sep 2018 – Jun 2019

A national web service for road hauliers: carriers enter a load, and it generates the AST transport authorisation as a QR-stamped PDF, emailed automatically and checked at the roadside.

LARAVEL · MYSQL · WSDL · QR · PDF

LIVE: [TODO](#)

REPO: [TODO](#)
